

Notes:

VBUS and GND originate from J2, which connects to the BC-250 USB port.

Keep D+/D- runs from the USB ports to the Multiplexer as short as possible, and the same length.

USB-Wake circuit for BC-250 when using new 2026 Steam Controller
Based on original design by Martin Juhl Prendergast, modifications by Tony Fabris
Requires custom code running on ESP32. See README.md for details.
